

Software Developer

Professional Summary

Software developer with 25 years of engineering experience, including 11 years full-time (2014–2025). Hands-on experience using generative AI tools (ChatGPT, Claude) to accelerate development, design architectures, generate documentation, and build structured AI-assisted workflows — including custom Claude Code skills and multi-agent orchestration systems. 15+ years in manufacturing R&D, with a materials-testing background (subsea, aerospace, industrial manufacturing) and experience building reliable software that bridges applications and physical hardware.

Work Experience

SOFTWARE DEVELOPER, TELEDYNE IT SHARED SERVICES

Daytona Beach, FL — 2016 to April 2025

- Developed desktop applications in C#
- Built and maintained internal intranet SharePoint sites and public-facing SharePoint websites
- Automated financial report generation in Excel by extracting data from multiple databases and compiling actionable insights
- Collaborated with cross-functional teams to deliver solutions that streamlined operations and improved data accessibility
- Built software supporting multiple Teledyne business units, including aerospace/imaging divisions such as Teledyne Imaging and Teledyne Space Imaging
- Participated in code review with fellow developers as part of the software development team

TECHNOLOGY INTEGRATION SPECIALIST, TELEDYNE OIL & GAS

Daytona Beach, FL — 2014 to 2016

- Developed several applications for data migration between ERP systems
- Integrated hardware and software systems for automated testing
- Implemented monitoring systems that notified users via email and text messages when tests exceeded defined safety thresholds
- Diagnosed hardware, software, and communication issues involving serial and network-connected devices
- Collaborated with engineers and technicians to resolve system failures and maintain reliable operation of test equipment

MATERIALS LAB FOCUS SUPERVISOR, TELEDYNE OIL & GAS

Daytona Beach, FL — 2006 to 2014

- Oversaw daily operations of the Materials Testing Laboratory
- Ensured all testing adhered to ASTM standards
- Scheduled testing workflows and coordinated with engineers to meet project deadlines
- Led a team of technicians to maintain high-quality data collection and reporting standards
- Played a pivotal role in the development and evaluation of new and existing products
- Conducted R&D; testing of elastomers, plastics, and ceramics to evaluate compatibility with various environments and chemicals

MATERIAL LAB TECHNICIAN, TELEDYNE ODI

Daytona Beach, FL — 2004 to 2006

- Collaborated with engineers to design and perform tests for new and existing products in compliance with ASTM standards

- Conducted daily inspections, measured test samples, and logged data into databases
- Compiled and presented comprehensive reports in Excel and PowerPoint

TEST TECHNICIAN / PROGRAMMER, TELEDYNE ODI

Ormond Beach, FL — 2000 to 2004

- Worked closely with engineers to conduct tests on new and existing products for Teledyne ODI's sub-sea jumper assemblies (sub-sea communication and power distribution)
- Configured test systems and managed the operation of pressure tanks for the oil and gas industry
- Authored several programs in C# and Visual Basic to automate test processes, including hardware communication and monitoring for safety parameters, real-time data logging and graphical representation, automated notifications via text and email, and database integration for data collection and analysis

Core Skills

Programming Languages & Tools

- TSQL and MySQL
- Created several scripts for migrating data from Microsoft Dynamics AX ERP to IFS ERP

VBA (Excel Macros)

- Automated data transformation, visualization, and API integrations
- Pulling data from several sources and generating financial reports
- Automated extracting data from a file and generating charts based on the data

C#

- Expertise in .NET for application and web development
- Developed applications for test automation and daily task automation

Python

- Built tools for data extraction and reporting from various file formats

Version Control

- Proficient in Git for source code management and collaboration using GitHub

Web Development

- Frontend development: proficient in HTML, JavaScript, and CSS
- CMS & backend development: developed custom content management systems using MySQL and PHP

Automation & Reporting

- Designed systems to automate data extraction and report generation
- Integrated hardware systems for real-time monitoring and control
- Automated notifications and alerts for anomaly detection and safety compliance

Communication & Leadership

- Strong collaboration with engineers and cross-functional teams
- Experienced in leading teams to meet deadlines and ensure quality outcomes
- Skilled in translating technical concepts into actionable insights for stakeholders

AI-Assisted Software Development

- ChatGPT (GPT-5.x)
- Claude / Claude Code
- AI prompt engineering
- Multi-agent AI workflow design

- AI-assisted code generation, review, and debugging
- Technical specification and documentation generation
- AI-assisted software architecture and planning

Relevant Interests

- 3D Printing: designing and fabricating prototypes for personal projects
- 3D Modeling: currently using Adobe Fusion to design a mini 10-inch rack mount server home lab for networking and NAS storage
